

As manufacturers we guarantee the quality of our products by the controls of our production process as well as in the service and after-sales support.

1. The manufacture of the pipes and / or pieces of the green line EUROTUBOS are manufactured under the REF. ISO 15874 - Piping systems in plastic materials for hot and cold water installations Polypropylene random-(PPr) "Plastics piping systems for hot and cold water installations Polypropylene random".
2. The raw material used in each batch must be tested (MFR-Melt Flow Rate) ILO-Oxidation Induction Time (Density and melting point) before carrying out the production.
3. Supervision during the production process, where we have a trained staff that takes quality standards step by step, thus guaranteeing that all diameters (20, 25, 32, 50, 63, 90, 110 and 160 mm) are inside of the parameters.
4. Eventual inspection of the finished products, where our quality control team randomly chooses a product to perform the place tests, the main ones being: hydrostatic and impact.
5. We offer pressure tests with a qualified team, both physical and human (consult the service conditions).
6. The workers installing the product must be trained, as the fusion steps must be taken into account within the standard tolerance.
7. We offer direct support from the factory with orientation for the correct installation, as well as any other question that may arise in the process. Ambassador Green Line Eurotubos
